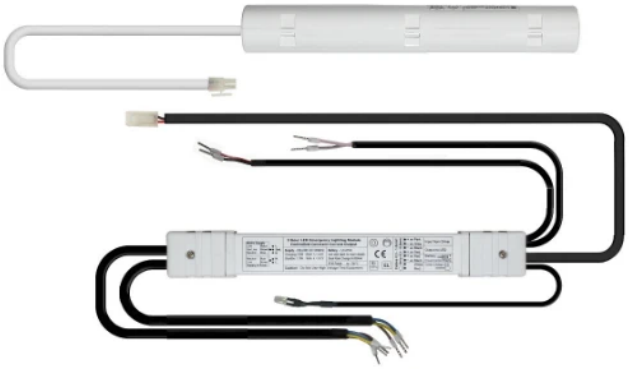
Antares

TLP/1S/TP40/R



IP20

DESCRIPTION

The Anatres is a two-part remote, 3-hour switchable emergency lighting module designed to suit a wide range of LED types, circuits and applications. Whilst the ANT01 is designed for high-voltage LEDs or longer linear applications, it can run certain self-driven lamps, such as GU10s (subject to testing). The unit operates with lithium iron phosphate (LiFePO4) batteries and is supplied as a pre-wired two-part pack for remote mounting from the luminaire when integral mounting is not possible. The pack will pass through a 40mm or greater aperture. The module automatically adjusts the output current to provide the best match between the battery and the load, maximising illumination whilst ensuring full battery life. The module is supplied with a green charge healthy indicator LED. This range uses the latest LiFePO4 battery technology, dramatically reducing energy consumption and facilities management labour. The Antares has been independently certified by TÜV, ensuring the product has been tested for safety and complies with national and international regulations.
